

Anorexia Nervosa Treatment Study at Massachusetts General Hospital

Description:

Adult Women, ages 18 to 45 years old, with ANOREXIA NERVOSA or who have recently experienced severe weight loss are needed for a research study looking at the role of a natural hormone on depression, anxiety and symptoms of anorexia nervosa. The study includes outpatient visits at Massachusetts General Hospital. Participants will receive physical examinations, nutritional and hormonal evaluations. There are two bone density scans completed as part of this study.

There is \$750 stipend for participation and parking and transportation costs are reimbursed.
