

Caregiver Research

Description:

Are you the mother of a child who is receiving outpatient treatment for Anorexia Nervosa? If so, weâ€™d like to invite you to participate in an anonymous study examining the experience of caring for a child with Anorexia Nervosa. We hope these research findings will provide greater insight into how a childâ€™s illness affects families, so that more support services can be developed to help caregivers. To be eligible for this study, you must be the mother of a child with Anorexia and currently be in a committed relationship. If your child is between the ages of 10-21, is currently receiving outpatient treatment for Anorexia, and is living with you and your spouse/partner at home, we invite you to participate in this important study. Participation will involve completing the questionnaire online and will take approximately 15-30 minutes. You will not be asked to provide your name at any time.
